### ABSTRACT

This study assessed the effectiveness of a Teaching Interaction procedure for four social skills across three participants diagnosed with autism. All social skills fell into four broad domains (i.e., social-communication, play, emotion skills, and choice/selection skills). In addition, a teaching package was used to increase communication between the three participants and three selected target peers. The teaching package consisted of the Teaching Interaction procedure, reinforcement, and priming of participants to demonstrate social skills and to engage with their target peers. Prior to intervention, participants displayed near zero levels of the four social skills that were targeted; after intervention, all three participants were able to demonstrate these skills. Prior to intervention, participants did not communicate or play with their selected target peer; after intervention, participants were able to increase the amount of play and communication. A multiple baseline design showed that the teaching package was effective in teaching both the targeted social skills and in increasing the development of initial associations that could lead to friendships for three children diagnosed with autism.

## 互動教學法 VS 社交技巧

社交技巧決定一個人的人際關係，更深遠地影響生活質素。良好的人際關係會為我們帶來快樂、希望和支持；而缺乏友誼則會使我們感到孤獨、沮喪和空虛。

對於患有社交障礙或自閉症的學生，社交技巧往往不能自然地發展，他們需要透過學習掌握適當的技巧。早於1970年，堪薩斯大學確立了「互動教學法」幫助誤入歧途的青少年改過自新，及後越來越多的學術研究支持「互動教學法」能有效幫助患自閉症的兒童和青少年學習不同的社交技巧。最近一項研究顯示，互動教學法比社交故事 (Social Stories) 更能有效提升社交技巧。對已有一定語言和認知能力的學生起顯著功效。

## 學校評價

楊生 Raymond 和他的治療團隊表示衷心感謝，感謝他們提供專業的培訓給我們的學生。在 Raymond 的指導下，這班有特殊需要的學生意圖參與這個有趣而富意義的項目，學習提升社交及溝通的技巧。

對於我的學生很樂意去參加這個培訓，我感到相當振奮。同樣地，家長對於培訓班的成效也給予很高的評價。

採用以學生為中心的教學方式以及個別化的培訓方案，他們的團隊不僅成功地展示了專業的水準，亦協助學生們達到培訓目標。
