

Using Seppo – Tips and Tricks

Player

Improved video and audio answering for Android users

Players using Android devices can record their video answers using new Seppo Camera. It creates significantly smaller video files, around 1/20 of the size of high quality videos, which shortens upload times. Also audio answers can be recorded directly in seppo. Seppo Camera works best in Chrome.

Picture share to social media

Players can attach pictures from the answer to their Facebook and Twitter posts.

Teacher/Instructor

Search from own games

Instructors who have a large number of games can use search to find them more easily.
Tip: name your games systematically and it's easier to manage them.

Grading improvements

If instructor asks for a revised answer, the previous and revised answer versions are both shown in the grading view. That helps the instructor to see how the team has changed the answer.

Instructor can filter the exercises on the grading list to see only ungraded answers.

Categorising games

Games can now be categorised into several (max 5) different subjects. This feature is useful when the games include tasks that are relevant for several subjects.

Admin

Modifying user credentials email

Customer admin (= person who can create additional users in customer account) can modify the automatic email that contains the user account details for new users.
