A TASTE OF AI'S CONCEPT AND APPLICATION IN JUNIOR SECONDARY

If we teach today's students as we
taught yesterday's, we rob them of
tomorrow.

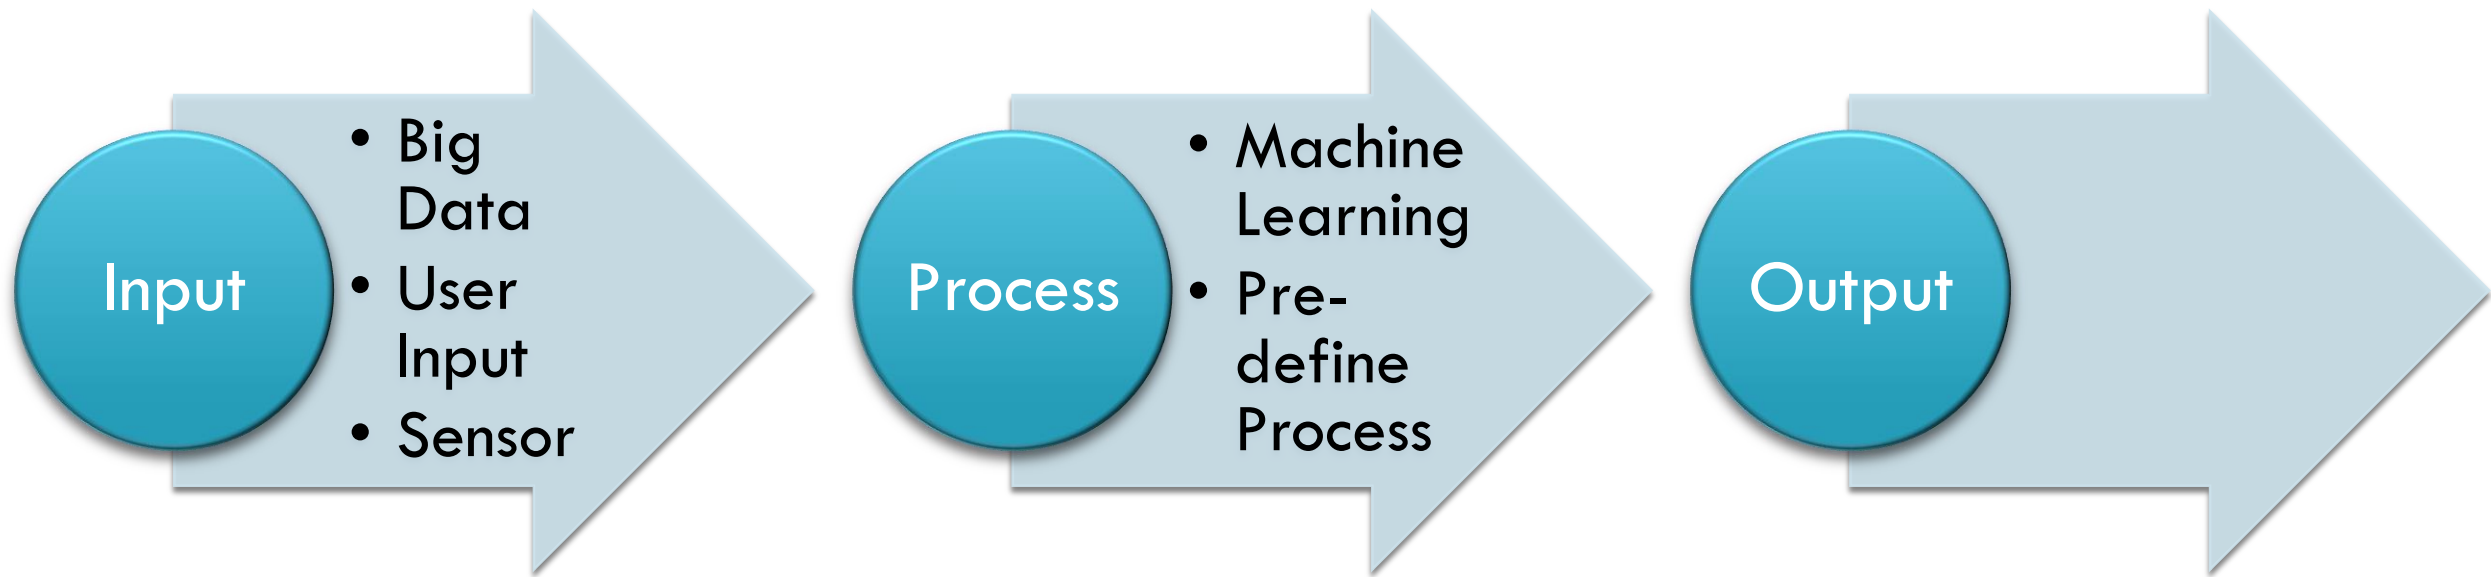

— *John Dewey* —

AZ QUOTES

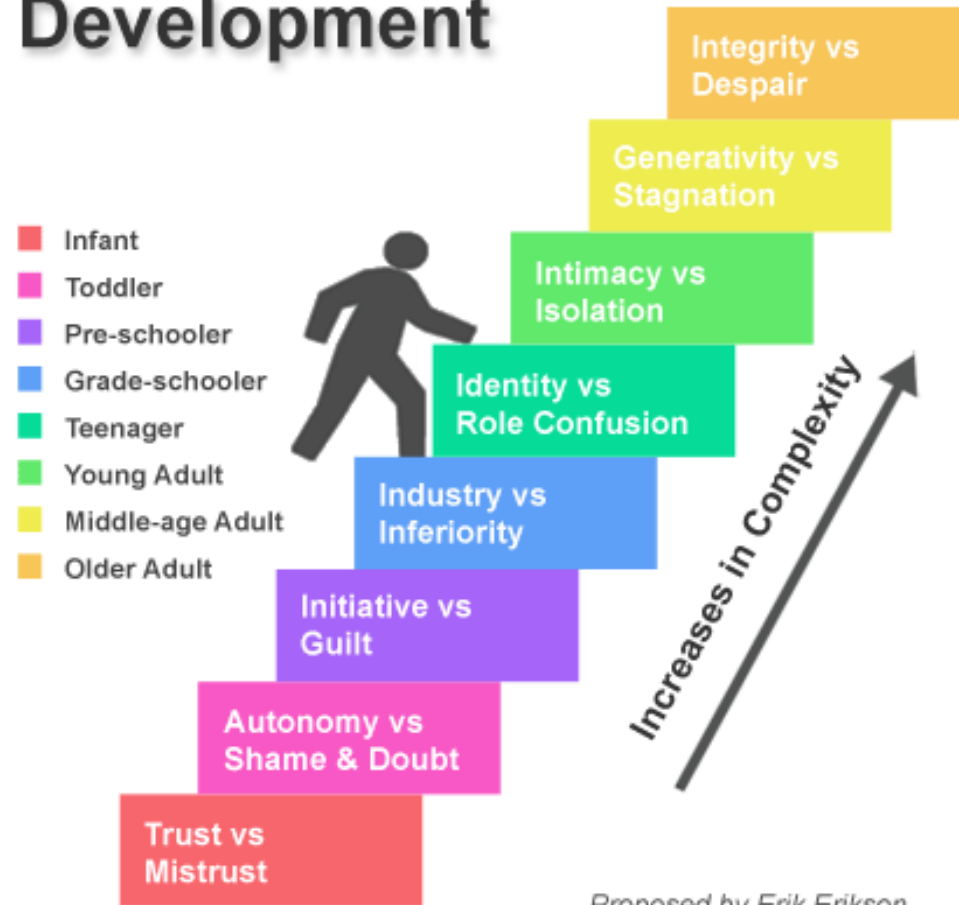

Future careers will become increasingly interdisciplinary as students work with the various components that are part of AI, like robotics, cognitive systems, and machine learning. As educators, we have the opportunity to model our openness to learning and teaching more than one subject domain. While machines are often specific to a particular domain, humans have the ability to cross domains and create applications across fields. That is why this book makes unexpected connections between the arts, sciences,

TEACHING AI

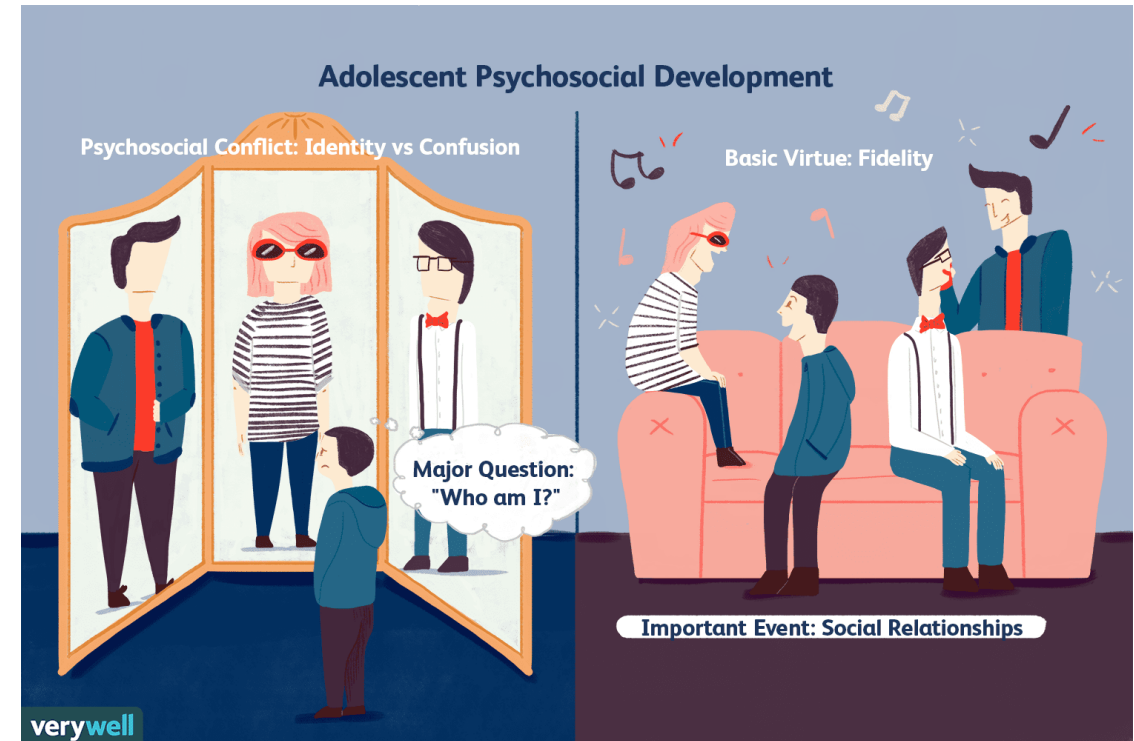

Stages of Psychosocial Development

Proposed by Erik Erikson

Erikson's Stages of Psychosocial Development

**LEARNING
WITH FUN!**

**WE PROMOTE
AI EDUCATION
TO ALL
STUDENTS.**

AI Areas

Machine learning

Developing and improving algorithms that help computers learn from data to create more advanced, intelligent computer systems.

AI, people, and society

Examining the societal and individual impacts on the spread of intelligent technologies to formulate best practices for their design.

Cyberphysical systems and robotics

Developing formal methods to ensure the integrity of drones, assistive robotics and other intelligent technologies that interact with the physical world.

Human language technologies

Linking language to the world through speech recognition, language modeling, language understanding, spoken language systems, and dialog systems.

Systems, tools and platforms

Integrating intelligent technologies to create interactive tools such as chatbots that incorporate contextual data to augment and enrich human reasoning.

Human AI collaboration

Harnessing research breakthroughs in artificial intelligence to design technologies that allow humans to interact with computers in novel, meaningful and productive ways.

Perception and sensing

Making computers and devices understand what they see to enable tasks ranging from autonomous driving to analysis of medical images.

Integrative intelligence

Weaving together advances in AI from disciplines such as computer vision and human language technologies to create end-to-end systems that learn from data and experience.

Decisions and plans

Reasoning about future events to enable informed collaborations between humans and intelligent agents.

PROPOSED AI AREAS FOR LEARNING

Vision

Image-processing algorithms to smartly identify, caption, index, and moderate your pictures and videos.

Knowledge

Map complex information and data in order to solve tasks such as intelligent recommendations and semantic search.

Language

Allow your apps to process natural language with pre-built scripts, evaluate sentiment and learn how to recognize what users want.

Speech

Convert spoken audio into text, use voice for verification, or add speaker recognition to your app.

Search

Add Bing Search APIs to your apps and harness the ability to comb billions of webpages, images, videos, and news with a single API call.

Get started

LEARNING AI THROUGH PROJECT LEARNING

**Junior Secondary Project:
Object Identification**

ABOUT THE PROJECT

Set a topic:

E.g. Identify
Cats and Lions

4 students a group

3-minute PowerPoint presentation

2 sets of photos

1 Worksheet

3-MINUTE POWERPOINT PRESENTATION

Why this topic? Why
Cats and Lions?

What is the similarity
and difference (in the
outlook) between Cats
and Lions?

How many images do
you use to teach the
machine?

How to choose the
images? Any criteria?

What kind of
information can be
shown in the “**Analyze
an image**”?

What kind of photos
mostly can be
identified by your AI?

What kind of photos
may not be identified
correctly by your AI?

	<pre>"name": "close", "confidence": 0.288444 }, { "name": "garden", "confidence": 0.2211698 }, { "name": "colored", "confidence": 0.1349126 }]</pre>
Description	<pre>{ "tags": ["cat", "grass", "animal", "sitting", "flower", "standing", "small", "blue", "gray", "looking", "close", "face", "white", "garden", "grey", "little", "green", "bird", "wearing", "table", "perched", "eyes", "colorful", "red", "yellow"], "captions": [{ "text": "a close up of a cat", "confidence": 0.949099 }] }</pre>

Custom Vision AI

Distinguishing grapes and cocoa beans

WHY?

They are quite hard to distinguish, so with AI it can help us identify it and can increase the efficiency of work.

Although still in development, after the general brief idea, adjustments can be made and soon later it may even become a product!

similarities

1. They look round in shape
2. Their different variations of colours still look similar

differences

1. The shape of the leaves are different
2. The way they are grown together is different

SENIOR SECONDARY PROJECT

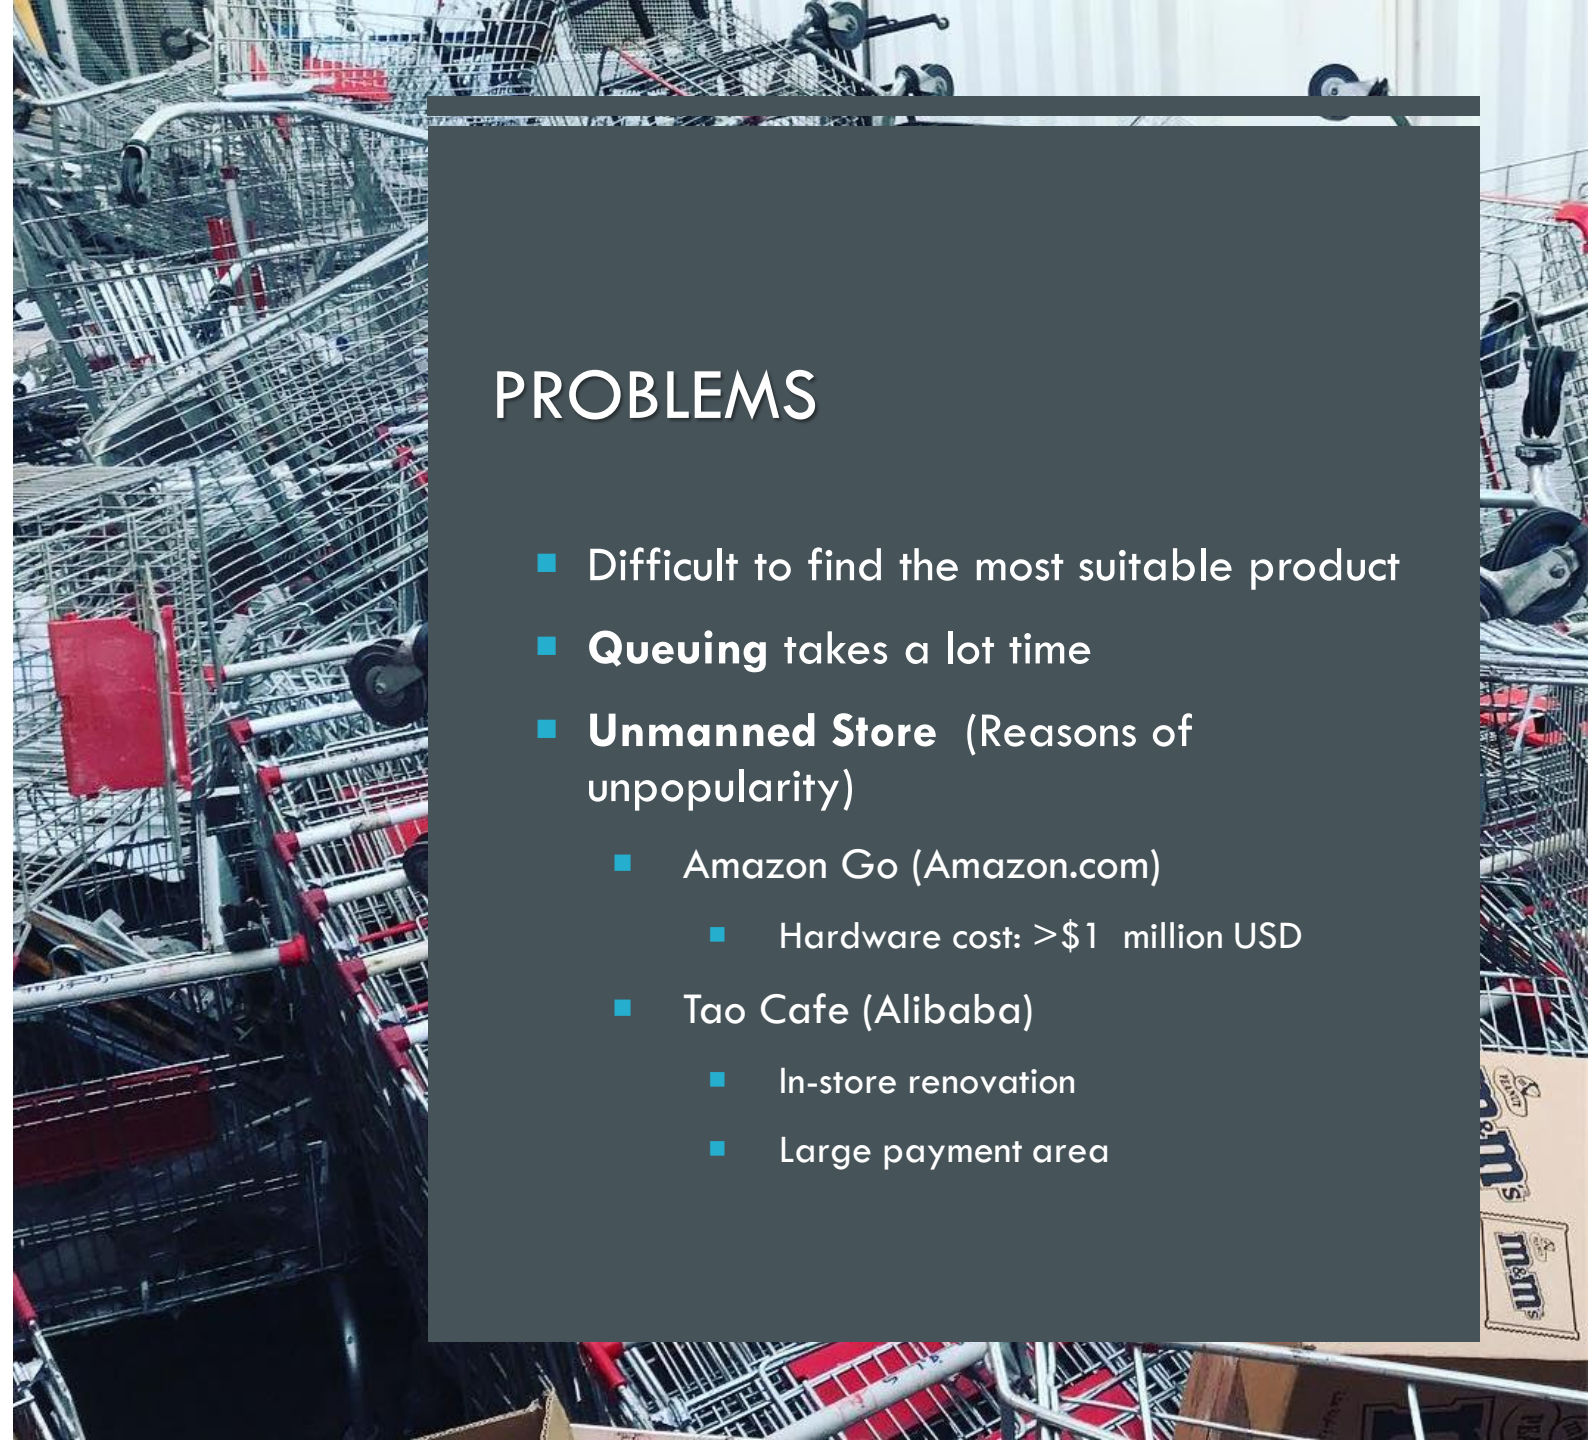

**PROJECT FOR WILLIAM JESSUP UNIVERSITY
COMPUTER SCIENCE COMPETITION FOR
HIGH SCHOOL STUDENTS**

Smart Shopping

Project Name:
School Name:

NARV - Z
Ying Wa College

PROBLEMS

- Difficult to find the most suitable product
- **Queuing** takes a lot time
- **Unmanned Store** (Reasons of unpopularity)
 - Amazon Go (Amazon.com)
 - Hardware cost: >\$1 million USD
 - Tao Cafe (Alibaba)
 - In-store renovation
 - Large payment area

Solution

NARV - Z

Unmanned Store? We can do better!

- **Low cost** on hardware
- **One Stop Service**
- Fully autonomous
- Item list and user reviews
 - Instantly compare prices for different brands
 - Find the ideal product under a few minutes

Benefits

For Supermarket

- Reduce manpower
- Prevent man-made mistakes
- No in-store renovation

***>700 Supermarkets in Hong Kong,
How many in the world?***

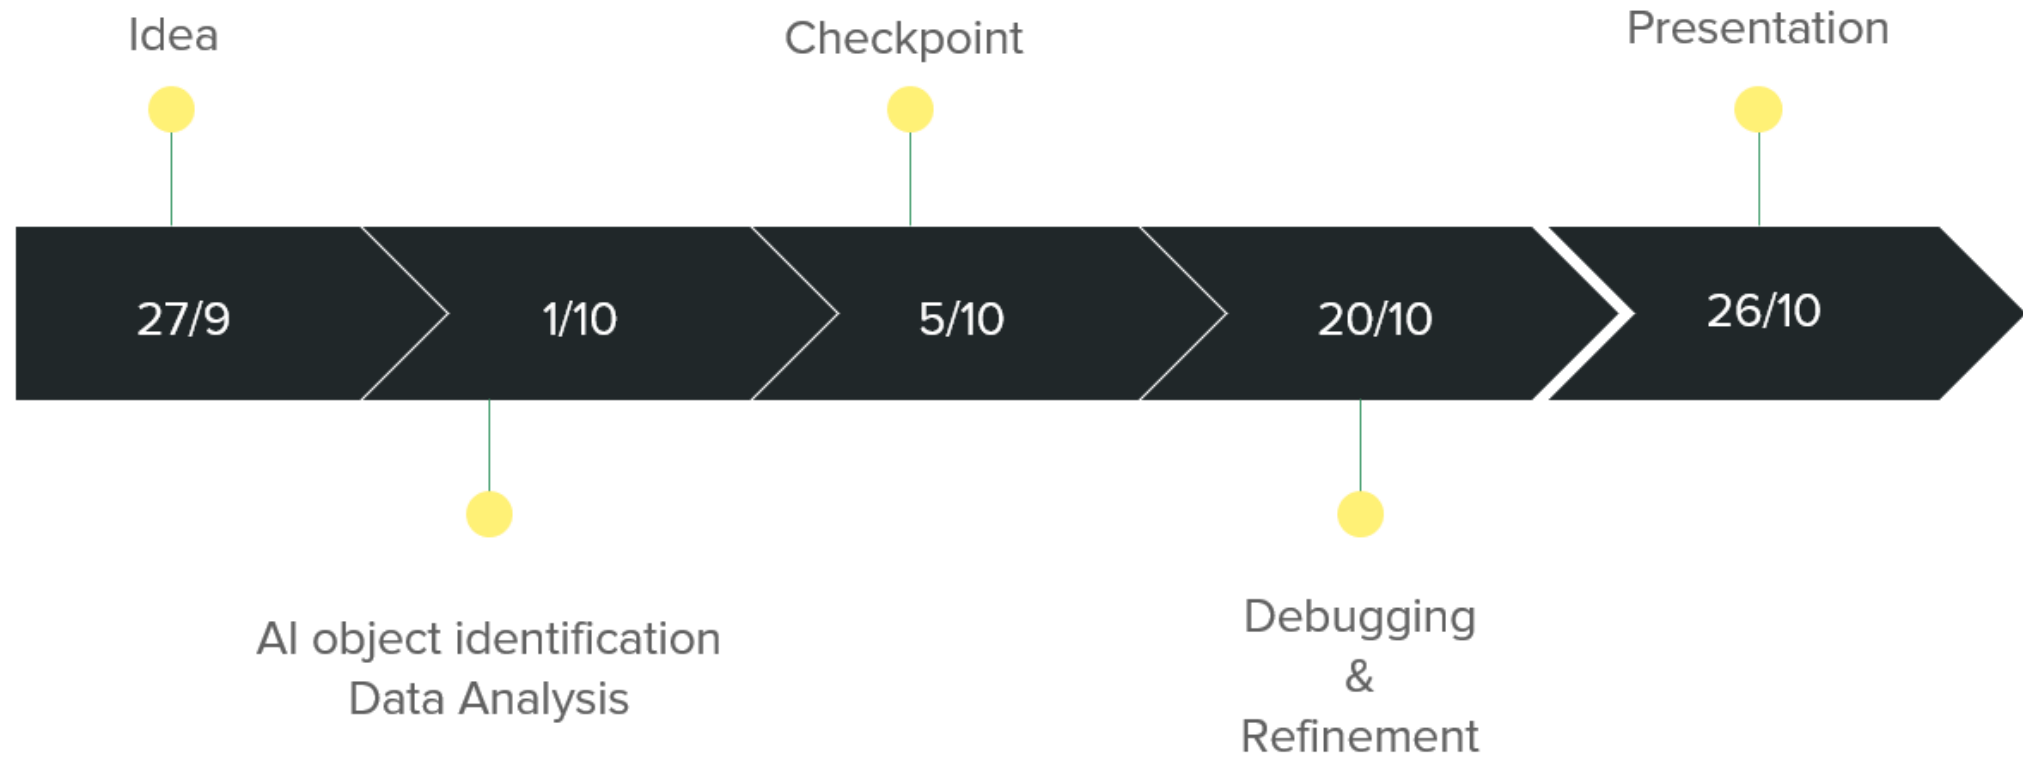

Detachable

**Scalable
application**

**Large
opportunities**

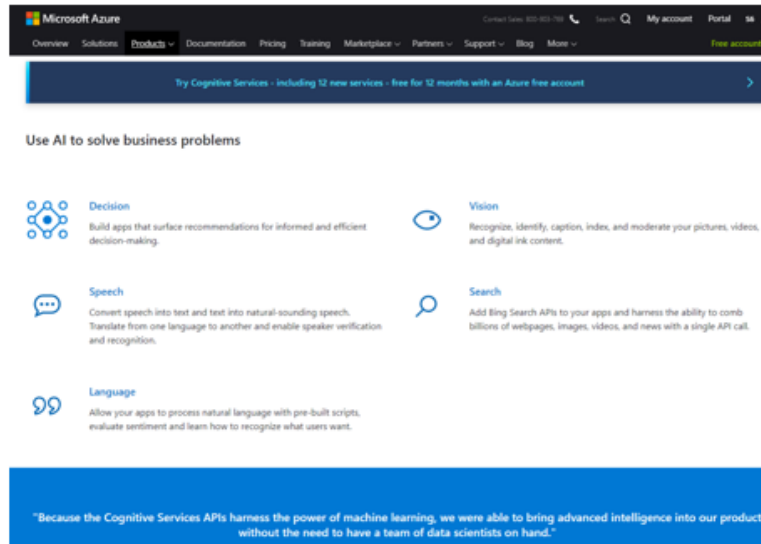

Project Management

Main Focus

A.I. Object Detection

The screenshot shows the Microsoft Azure website's 'Products' section. It features a navigation bar with links like Overview, Solutions, Products, Documentation, Pricing, Training, Marketplace, Partners, Support, Blog, and More. A banner below the navigation bar promotes 'Try Cognitive Services - including 12 new services - free for 12 months with an Azure free account'. The main content area is titled 'Use AI to solve business problems' and lists four categories: Decision, Vision, Speech, and Language, each with a brief description of the services offered. A quote at the bottom states: 'Because the Cognitive Services APIs harness the power of machine learning, we were able to bring advanced intelligence into our product without the need to have a team of data scientists on hand.'

Microsoft Azure

Overview Solutions **Products** Documentation Pricing Training Marketplace Partners Support Blog More

Try Cognitive Services - including 12 new services - free for 12 months with an Azure free account

Use AI to solve business problems

Decision
Build apps that surface recommendations for informed and efficient decision-making.

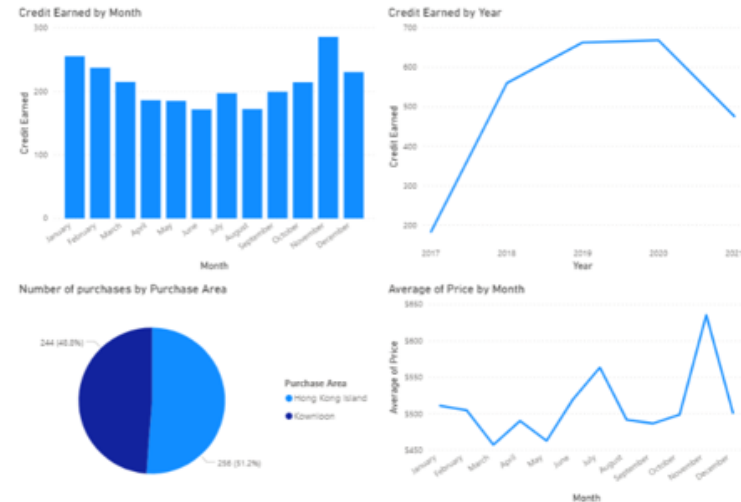

Vision
Recognize, identify, caption, index, and moderate your pictures, videos, and digital ink content.

Speech
Convert speech into text and text into natural-sounding speech. Translate from one language to another and enable speaker verification and recognition.

Language
Allow your apps to process natural language with pre-built scripts, evaluate sentiment and learn how to recognize what users want.

"Because the Cognitive Services APIs harness the power of machine learning, we were able to bring advanced intelligence into our product without the need to have a team of data scientists on hand."

Cloud based Data Analysis

Services considered:

Microsoft Custom Vision AI, YOLO, Tensorflow, IBM Cloud

Limitations:

YOLO: Require darknet implementation

Tensorflow: Server hosting is necessary

IBM Cloud: Low accuracy

TensorFlow

YOLO

IBM Cloud

Microsoft PowerApps AI builder

Pros: Best performance

Cons: Unable to return real-time result

We have trained

>300 Images

>60 for each item

Why we train that many data sets?

→ Low accuracy

- ◆ Errors caused by unclear images & overlapped items
- ◆ Insufficient amount of reference images

→ Errors

- ◆ Limited variety of product database

Photo Requirements

- Close up shots
- Stacked situation
- Various angles
- Bright lighting
- High resolution

Training Process

1. Upload photos
2. Find suitable images
3. Train the computer to recognise objects
4. Quick test
5. Debug

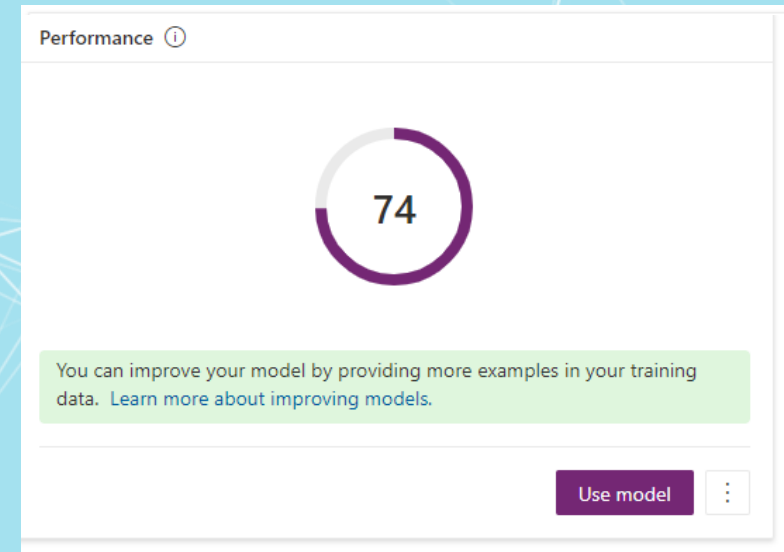

✓ Do

Draw a crisp rectangle tightly around each object.

FAULT TOLERANCE

Accuracy up to **74%**

NARV - Z

JOHN DEWEY

The world is moving at a tremendous rate; no one knows where. We must prepare our children not for the world of the past, not for our world, but for their world. The world of the future.

“Education is not the learning of facts, but the training of the mind to think.”

Albert Einstein
1879 - 1955
